PROFILE SUMMARY

Software Engineering student with a strong interest in learning through real-world projects and practical problem-solving. I enjoy exploring new technologies, understanding how systems work under the hood, and continuously refining my skills through hands-on development. Motivated by growth, curiosity, and the opportunity to create software that makes a meaningful impact.

EDUCATION

Islamic University of Technology (IUT)
Bachelor of Science in Software Engineering
Expected Graduation: October 2027
CGPA : 3.07

Rajuk Uttara Model College
Higher Secondary Certificate
Passing Year : 2022
GPA : 5.00

Rajuk Uttara Model College
Secondary School Certificate
Passing Year : 2020
GPA : 5.00

PROJECTS

Edvantage – Learning Management System

Laravel, PHP, JavaScript, MySQL, WebRTC

- Developed key LMS features including discussion forums, assignment management, and course recommendation functionalities.
- Implemented live class integration using WebRTC with support for video, audio, screen sharing, and session recording.
- Built secure online examination features including webcam monitoring and screen recording for proctored assessments.
- Integrated AI-powered chatbots for platform assistance and document-based question answering from uploaded learning materials.

CollabHive – Team Collaboration Platform (Ongoing)

React, Node.js, Express.js, MongoDB, JavaScript, JWT

- Developed a full-stack team collaboration platform using the MERN stack with secure JWT-based user authentication.
- Built responsive React interfaces with protected routes, reusable components, and seamless API integration using Axios.
- Designed and implemented RESTful APIs using Express.js and MongoDB for user authentication, data management, and backend operations.
- Followed a modular client-server architecture to create a scalable and maintainable web application with efficient database connectivity.

UNIX Shell for mCertiKOS

C, Operating Systems, QEMU, Git

- Extended the mCertiKOS operating system by developing a UNIX-style shell with support for pipelines, I/O redirection, and process management.
- Implemented file descriptor abstraction and kernel-level pipe communication for inter-process data transfer.
- Developed command parsing and execution logic supporting multi-stage command pipelines and filesystem operations.
- Worked with low-level operating system concepts including system calls, process spawning, memory management, and filesystem internals.

FitHub – Gym Management System

Java, OOP, Git

- Developed a gym management platform supporting member registration, trainer management, attendance tracking, and class scheduling.
- Applied object-oriented design principles to model business processes and system components.
- Implemented progress tracking and reporting features to monitor member activities and performance.
- Collaborated in a team-based development environment using Git for version control and project coordination.

TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript, PHP, SQL

Frameworks & Technologies: Laravel, Blade, REST APIs, WebRTC, OCR, AI Chatbot Integration

Databases: MySQL, Database Design, SQL

Software Engineering: OOP, Data Structures & Algorithms, Operating Systems, MVC Architecture, Authentication & Authorization

Tools: Git, GitHub, VS Code, IntelliJ IDEA, QEMU

ACHIEVEMENTS

- Solved 100 programming problems on Codeforces.
